

TELTONIKA CONNECTIVITY SOLUTION

CELLULAR CONNECTIVITY - SIM AND ESIM WITH GLOBAL DATA PLANS FOR 5 YEARS.

Connectivity for Things makes IoT simple. It leverages a global mobile network to connect Teltonika devices anywhere and provides control over connectivity and device activation, also to manage, monitor and analyze your SIM cards and data usage through an easy-to-use internal IoT platform. With the help of this solution, Teltonika GPS trackers reduce recurring roaming costs in the 108 countries globally.

ONE SUPPLIER - FULL CONNECTIVITY SOLUTION

The fewer supplier end-points, the more time you will save due to multiple negotiations, shipping problems and other issues. Get the SIM card and Teltonika GPS tracker in one.

ONE-TIME PAYMENT FOR 5 YEARS

Just one payment and you get a 500 Mb data bundle for the for **the next 5 years!** You and your customer can concentrate on the business and be assured, that network operators won't increase price or data capacity for the next 5 years. If the data limit is reached before the plan period ends, you can easily top-up the plan with the same conditions to renew your connectivity for the next 5 years again.

EASY MANAGEMENT BY INTERNAL IOT PLATFORM

It leverages a global mobile network to connect Teltonika devices anywhere and provides control over connectivity and device activation, also to manage, monitor and analyze your SIM cards and data usage through an easy-to-use internal IoT platform.

GLOBAL NETWORK COVERAGE

Wide network coverage provided in the 110 countries from Africa, Asia, Europe, Americas and Oceania to avoid any communication disruptions. Up to 3 different network operators are supported in each country, in some countries even more. It helps to reduce your clients' roaming costs in a usage of trusted network quality.

eSIM AVAILABILITY

A smart, rewritable, and multi-network module which can either be embedded into the device itself or written onto a plastic removable card. Highly resistant to physical demands and a fraction of the size of a removable SIM, not locked to a single operator for the lifetime of the device with the ability to update IoT deployments remotely

SAFETY

This solution is certified by many security badges as **GSMA SAS Certification, ISO 27001 Certification, UK Cyber Essentials Plus**. Our SIM card supplier is now a certified organization, thus assuring that all criteria for external services, corporate operating system images, and cyber controls are in place to protect your customers' information.
